

Review: Scatterplot

1. We want to use the seaborn library functions, like scatterplot. What do you need to do first?
2. You want to work with the built-in seaborn dataset tips. What do you have to do?
3. Which functions could you use to inspect the data?

What is wrong with this code?

```
sns.scatterplot(data=tips, x=total_bill, y=tip)      # 4  
plt.show()
```

```
sns.scatterplot(tips, x="total_bill", y="tip")      # 5  
plt.show()
```

```
sns.scatterplot(data=tips, x="total_bill", y="tip") # 6  
plt.title = "Tip vs. Total Bill"  
plt.show()
```

```
sns.scatterplot(data=tips, x="total_bill", y="tip") # 7  
plt.xlabel("Tip in dollars")  
plt.ylabel("Total bill in dollars")  
plt.show()
```

```
sns.scatterplot(data=tips, x="day", y="tip") # 8
plt.title("Tip by Day")
plt.show()
```

```
sns.scatterplot(data=tips, x="size", y="tip") # 9
plt.title("Tip vs. Party Size")
plt.show()
```

```
# 10
sns.scatterplot(data=tips, x="total_bill", y="tip", hue=time)
plt.show()
```

```
sns.scatterplot(data=tips, x="total_bill", y="tip", # 11
color="smoker")
plt.show()
```

```
sns.regplot(data=tips, x="day", y="tip") # 12
plt.show()
```

```
tips = sns.load_dataset(tips) # 13
sns.scatterplot(data=tips, x="total_bill", y="tip")
plt.show()
```
